

Fiji ImageJ

Sum Projection Macro Code

SumProjection.ijm

```
1 // Macro to create a sum orthogonal projection of directory of images
2
3 // The next line prevents ImageJ from showing the processing steps during
4 // processing of a large number of images, speeding up the macro
5 //setBatchMode(true);
6
7 // Show the user a dialog to select a directory of images
8 inputDirectory = getDirectory("Choose a Directory of Images");
9
10 // Get the list of files from that directory
11 // NOTE: if there are non-image files in this directory, it may cause the macro to crash
12 fileList = getFileList(inputDirectory);
13
14 for (i = 0; i < fileList.length; i++)
15 {
16     processImage(fileList[i]);
17 }
18
19 //setBatchMode(false); // Now disable BatchMode since we are finished
20 updateResults(); // Update the results table so it shows the filenames
21
22 function processImage(imageFile)
23 {
24     open(imageFile);
25     // Get the filename from the title of the image that's open for adding to the results table
26     // We do this instead of using the imageFile parameter so that the
27     // directory path is not included on the table
28     filename = getTitle();
29
30     // Create an orthogonal projection of the sum of all the slices, arrange the channels,
31     // and make a composite image
32     run("Z Project...", "projection=[Sum Slices]");
33     run("Arrange Channels...", "new=21");
34     ProjectionName = "SUM_" + filename;
35
36     // Duplicate the projection to create the combo channel, set both channels as cyan,
37     // make a composite, and stack to RGB
38     run("Duplicate...", "duplicate");
39     Stack.setChannel(1);
40     run("Cyan");
41     Stack.setChannel(2);
42     run("Cyan");
43     run("Make Composite");
44     run("Stack to RGB");
45     setOption("ScaleConversions", true);
46     run("16-bit");
47     CyanChannel = "[" + replace(ProjectionName, ".czi", "-1.czi (RGB)");
48
49     // Split channels of original projection
50     selectImage(ProjectionName);
51     run("Split Channels");
52     RedChannel = "C1-" + ProjectionName;
53     GreenChannel = "C2-" + ProjectionName;
54     selectImage(RedChannel);
55     setOption("ScaleConversions", true);
56     run("16-bit");
57     selectImage(GreenChannel);
58     setOption("ScaleConversions", true);
59     run("16-bit");
60     run("Merge Channels...", "c1=" + RedChannel + " c2=" + GreenChannel + " c5=" + CyanChannel + " create");
61
62     // Save the generated images in the same directory
63     SaveName = ProjectionName;
64     saveAs("tiff", inputDirectory+SaveName);
65
66     close("*"); // Closes all images
67 }
```
